Snapshot: Status of Public Hospitals in the Syrian Arab Republic

December 2015

This is to acknowledge that the data provided in this snapshot is a product of joint collaboration between the World Health Organization, Ministry of Health, and Ministry of Higher Education in the Syrian Arab Republic. The report covers the month of December 2015.

Contents:

This document provides a snapshot of the status of public hospitals under the Ministries of Health and Higher Education, as of December 31, 2015 in terms of functionality, accessibility, and level of damage.

1. Completeness of Reporting

The completeness of reporting of public hospitals across Syria remained 100%, where all 99 Ministry of Health (MoH) Hospitals and 14 Ministry of Higher Education (MoHE) hospitals continued to report to HeRAMS in December 2015.

2. Functionality Status

Functionality of the public hospitals has been assessed at three levels: fully functioning, partially functioning, or not functioning.

By the end of December 2015, and out of the **113** assessed public hospitals [MoH & MoHE], 43% (49) were reported fully functioning, 31% (35) hospitals were reported partially functioning (i.e., shortage of staff, equipment, medicines or damage of the building in some cases), while 26% (29) were reported non-functioning [Figure 1].

Distribution of public hospitals by functionality status is presented in Map 1.

Map 1: Distribution and Functionality status of the public hospitals [MoH & MoHE], December 2015

Trend analysis of functionality status of public hospitals throughout 2015 is presented in Figures 2. Persistent deterioration of functionality status has been observed, since beginning of 2015; **29** hospitals were reported out-of-service in December 2015 compared to **19** in January 2015 [Figure 2].

Figure 2: Trend analysis of functionality status, from January to December 2015

3. Accessibility Status

Accessibility to public hospitals has been assessed at three levels: accessible, hard-to-access, or inaccessible hospital for patients.

By the end of December 2015, 60% (68) hospitals were reported accessible, 18% (20) hard-to-access, and 22% (25) were inaccessible [Figure 3].

4. Level of Damage

The condition of the hospitals' buildings has been assessed at three levels: fully damaged, partially damaged, and not damaged.

By the end of December 2015, 42% (48) hospitals were reported damaged [13% fully damaged and 29% partially damaged], while 55% (62) of public hospitals were reported intact. The level of damage of three hospitals was unconfirmed due to escalating security situation (those are: Al-Bassel Tadmor, Al-Bassel Al-Qaryatein and Al-Bassel Sokhneh hospitals in Homs governorate) [Figure 4].

It is essential to cross-analyze the infrastructural damage of the public hospitals in relation to the functionality status (i.e. provision of services). Some hospitals have resiliently continued to provide services regardless of the level of damage of the building and by optimizing intact parts of the building or in a few cases operating from other neighboring facilities. The national figures translate as follows:

- Out of the **33 partially damaged hospitals**, 17 hospitals were reported partially functioning and 14 out of service (non-functioning), while two hospitals (Yabroud in Rural Damascus, and Ebn Khaldoun Psychiatric hospital in Aleppo) were reported to be fully functioning providing all services through salvaging medical equipment from the damaged section of the hospital with full staffing capacity.
- Out of the **15 fully damaged hospitals**, 10 were reported non-functioning while 5 hospitals have opted for innovative ways to continue providing health services to populations in need through partially functioning from other nearby temporary locations and provide health services with limited staff capacity and resources. *More details of the 5 hospitals are available in the HeRAMS database.*
- Then again, hospitals with **intact buildings (62 hospitals)** does not directly reflect full functionality, only 47 of the 62 intact hospitals are fully functioning, while 13 are partially functioning and 2 hospitals are not functioning all together, due to limited access of patients and health staff to the facilities resulting from the dire security situation as well as critical shortage of supplies.

The figure below provides trend analysis for the level of damage of the hospitals' buildings between January and December 2015.
