

Afghanistan 2014 Fact Sheet

The 2014 Afghanistan GSHS was a school-based survey of students in classes 7, 8, 9, 10, and 11, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in classes 7, 8, 9, 10, and 11 in Afghanistan. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Afghanistan GSHS measured dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scannable answer sheet.

The school response rate was 97%, the student response rate was 81%, and the overall response rate was 79%. A total of 2,579 students participated in the Afghanistan GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.
