❖ The Response

leishmaniasis in Deir Ezzor:

In response to Leishmaniasis outbreak in Deir Ezzor and to improve access to leishmaniasis health services and diagnosis; WHO in collaboration with the national control program conducted a training workshop on the laboratory diagnosis of leishmaniasis. 25 laboratory technicians from the high-risk governorates in Deir Ezzor, Hassaka, and Raqqa were trained on the laboratory procedures of leishmaniasis diagnosing. WHO is also supporting the national control program in the establishment of leishmaniasis laboratories in northeast governorates by providing microscopes and lab supplies,.

Acute flaccid paralysis: Stool samples were collected from AFP cases and sent to the reference lab in Damascus. Laboratory tests of all AFP cases in 2018 showed a negative result for polio. up to week 9 the annualized non-polio AFP rate is 5.7
