## Introduction

---

---

Collection development in health science libraries consumes a major part of the library budget. This includes book acquisition, journal, CD-ROM subscriptions and access to external information resources such as online services or full-text on the Internet.

Selection of materials for health science libraries has been one of the priority areas which requires assistance and advice. As part of the efforts of the Health Information Management and Telecommunications Unit to assist medical libraries in the Region, this List has been developed taking into consideration a number of factors affecting most libraries in the Region aiming to help them to identify, select and acquire materials in the most rational and cost-effective way, considering that:

1. Libraries are understaffed. They lack human resources to help in identification, selection and acquisition of library materials;
2. Libraries lack or have no access to systems and tools to be used for selection of materials and acquisition. Databases and bibliographic sources are not easily made available or accessible;
3. Libraries lack established criteria for selection of materials and collection development;
4. Libraries have very small budgets for collection development. This small budget has to be spent in a most wisely way.

In our selection, special emphasis was made on paper back and low-cost editions of classic and universally acceptable texts. These are usually issued by renowned medical publishers in United Kingdom and the United States.

The objective throughout the List was to attain sound scientific and updated collection within the limits of the continually decreasing book budgets in the major bulk of health science libraries in the Region. Hence, the cost per book title as measured in 50 specialized fields of medicine is \$83.07 marked in Annex I based on calculations made using the List. The List also shows the number of items per subject and the average cost per subject area. This contrasts significantly with many of the international lists where the cost per title is much higher.

The List covers 50 health science subjects in addition to dictionaries, directories, medical librarianship and information science and miscellaneous matters. It includes a total of 1749 titles covering different types of publications (books, series, annuals, journals, CD-ROMs ...etc). Materials were classified according to the National Library of Medicine Classification (NLM).

With regard to journal subscriptions, the aim was to select the most basic and widely circulating journals. Fortunately, these same journals happen to be

the least expensive. Professional bodies also largely publish these journals. Hence, their scientific and updating merits are beyond suspicion. The average cost of subscription per title has been \$318.68. The journals cost analysis by subject appears as Annex II. CD-ROM cost analysis by subject appears as Annex III. The average cost of CD-Rom per title has been \$275.21. A list of health and biomedical journals published in the Region and which appears on the Index Medicus of Eastern Mediterranean Region (IMEMR) is also included as Annex IV. The IMEMR has been published on the Internet and is accessible on <http://www.emro.who.int/HIS/VHSL/Imemr.htm>

In scope, the present edition has much expanded beyond the original concept of a medical faculty library. The strategy is now focused on items generally related to health development within a developing country setting. Hence, provision has been made for the medical faculty at both the undergraduate and postgraduate levels. The List also provides a sizable number of titles related to Faculties of Pharmacy, Dentistry, Nursing and Veterinary. Focus has also been made on the needs of public health administrators as well as various departments of Ministries of Health, including central laboratories. Current priority issues of the environment, as well as strategies of health care have also been emphasized. Items highly oriented to clinical and research aspects have generally been excluded. Hence, highly specialized institutions would have to seek other sources for the development and building up of their collections.

The List has been developed based on searching publishers' catalogues, the Global Books in Print, specialized bibliographic databases, book reviews and book announcements.

A database using the UNESCO WINISIS package has been maintained. In addition to this printed copy, the database has been made available in electronic format. It is available on EMRO Intranet and EMRO Web site <http://www.emro.who.int/HIS/VHSL/>. Copies of the database on CD-ROM or on floppy disk can be acquired in ISIS format, ISO 2709, ASCII or in MS Word. The file can also be downloaded from EMRO Home Page as PDF file <http://www.emro.who.int/HIS/VHSL/Doc/basiclist9.pdf> for libraries that have access to the Internet.

The body of the List is presented according to the subject category, which is then sorted by author and title with full citation and price.
