

Drink-driving

Facts from the Eastern Mediterranean Region

Drinking alcohol and driving increases the risk of a road traffic crash

Reducing blood alcohol concentrations (BAC) from 0.1 g/dl to 0.05 g/dl may contribute to a reduction of 6-18% in alcohol-related road traffic fatalities

Drink-driving law should be based on a BAC of no more than:

0.05 g/dl
for the general population

0.02 g/dl
for young or novice drivers

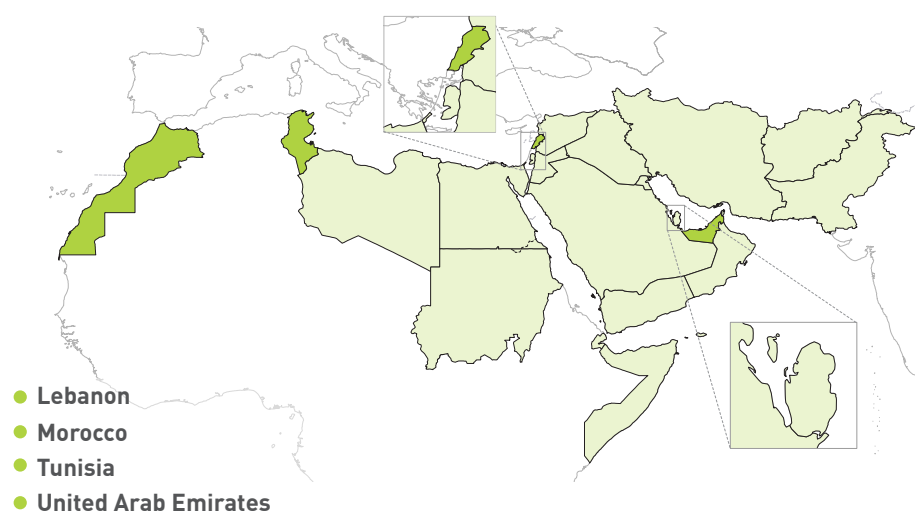

4

countries have a drink-driving law in line with best practice

Strictly enforcing a drink-driving law can reduce the number of road deaths by 20%

Only 26% of countries report enforcement of their drink-driving laws as good

Countries with a national drink-driving law in line with best practice

Percentages are calculated based on the 19 countries of the Region that participated in the survey for the Global status report on road safety 2018
