Monitoring health and health system performance in the Eastern Mediterranean Region

Core indicators and indicators on the health-related Sustainable Development Goals

2021

WHO Library Cataloguing in Publication Data

Names: World Health Organization. Regional Office for the Eastern Mediterranean

Title: Monitoring health and health system performance in the Eastern Mediterranean Region: core indicators and indicators on the health-related Sustainable Development Goals 2021 / World Health Organization. Regional Office for the Eastern Mediterranean

Description: Cairo: World Health Organization. Regional Office for the Eastern Mediterranean, 2021

Identifier: WHO-EM/HST/247/E

Subjects: Health Status Indicators | Social Determinants of Health - statistics & numerical data | Healthcare Financing | Health Workforce - statistics & numerical data | Sustainable Development | Eastern Mediterranean Region

Classification: NLM WA 900

- Health information and research in the Eastern Mediterranean Region at a glance..... 22

Foreword

Accurate, timely and comparable health-related statistics are indispensable for understanding population health trends. Decision-makers need the information to develop appropriate policies, allocate resources, prioritize interventions, and monitor and evaluate the public health situation, health care delivery and outcomes. WHO's Thirteenth General Programme of Work (GPW 13) for 2019–2023 emphasizes the use of data for health policy development and implementation. The focus in GPW 13 on the three “1 billion” goals (1 billion more people with universal health coverage, 1 billion more people better protected from health emergencies, 1 billion more lives made healthier) underlines the need for greater capacity in data collection, research and health information within countries and WHO. Investing in strengthening country health information systems to improve the timeliness of data could have a huge positive impact and is vital for countries to be able to monitor progress towards the Sustainable Development Goals (SDGs).

Improvement in health information not only relies on the generation and collection of valid data, it also requires the appropriate management and analysis of the data. Both the indicators for the SDGs and GPW 13 require subnational disaggregation of data for assessing progress made on the equity dimensions of care and population needs. The provision of the data presented in this booklet aims to enhance evidence-informed decision-making, in line with our other activities to strengthen the capacities of ministries of health in the use of evidence in policy development.

The strengthening of health information systems is a priority for WHO in the Eastern Mediterranean Region, as highlighted in Vision 2023, our regional vision for public health, and as illustrated by the challenge of getting accurate data on COVID-19 related deaths. Intensive work with countries since 2012 has resulted in a clear framework for health information systems. The selected core indicators reported on focus on three main components: 1) monitoring health determinants and risks; 2) assessing health status, including morbidity and cause-specific mortality; and 3) assessing health system response. The regional core indicators were endorsed by the WHO Regional Committee for the Eastern Mediterranean at its 61st session in 2014, after which countries started to adopt and report on the indicators. In 2016, the core indicator list was expanded in consultation with countries to add a set of additional SDG-related indicators, bringing the total number of core indicators to 75.

This year's report replicates the innovative design that was adopted in 2018 and welcomed by countries. All SDG 3 indicators are included in the core list that now includes the percentage of bloodstream infections due to selected antimicrobial-resistant organisms, which is being reported for the first time. A comprehensive regional report charting the progress towards the health-related SDGs is being published for the first time for the Region, drawing largely on data from January 2010 to September 2020.¹

WHO will continue in its efforts to support the countries of the Region in strengthening their national health information systems. This includes undertaking comprehensive health information system assessments, developing national strategies and improving national capacity in death certification and analysis, as well as International Classification of Disease (ICD) coding and (where appropriate) use of DHIS2 platforms to enhance the reporting of routine data. Additionally, we are working closely with countries to: introduce, pilot and scale-up ICD-11; provide practical guidance to implement rapid mortality surveillance and measure excess mortality in the context of the COVID-19 pandemic, with a focus on implementation in low-resource settings; implement COVID-19 sero-epidemiology studies; and support countries to develop e-prescription systems and electronic health records and ensure that key information is available in a timely manner.

This publication uses available data drawn from multiple sources, including figures provided by countries, the latest World Health Statistics publications, the Global Health Observatory and estimates developed by United Nations agencies, including WHO. Every effort has been made to incorporate the most comprehensive, recent and reliable data, and to validate the data with countries within a very short time frame. I welcome any input and observations on the data presented here.

^m All countries are certified free of dracunculiasis except Sudan

ⁿ All countries have validated elimination of lymphatic filariasis as a public health problem except Sudan

^o Onchocerciasis is only endemic in Sudan and Yemen

Monitoring framework for neglected tropical diseases in the Eastern Mediterranean Region (EMR)

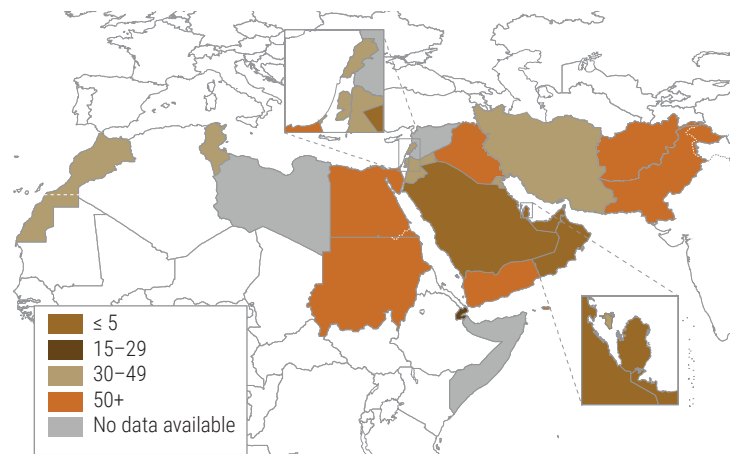

Target	Baseline 2020	Milestones 2023	Milestones 2025
Leprosy: To maintain the rate of grade-2 disability (G2D) to less than 1 per million in all countries by 2025 (except Somalia, Sudan)	EMR: 0.3	1 > EMR	1 > EMR
Visceral leishmaniasis: To reduce case fatality by primary visceral leishmaniasis to less than 1% in selected countries in the Region by 2025	6	7	10
Cutaneous leishmaniasis (CL): To increase detection and treatment of CL cases by 2025 in all endemic countries	Unknown	Will be determined based on the tools and guidance available from WHO to estimate all CL cases.	
Onchocerciasis: To increase coverage of preventive chemotherapy treatment to at least effective coverage levels in all endemic countries	1	2	2
Lymphatic filariasis: To scale down treatment in Sudan	1	1	1
Schistosomiasis: To eliminate schistosomiasis as public health problem	0	3	5
Soil-transmitted helminthiasis: To increase coverage of preventive chemotherapy treatment to at least effective coverage levels in all endemic countries by 2025	2	6	7
Trachoma: To eliminate trachoma in selected endemic countries	3	6	7
Mycetoma: To strengthen surveillance of mycetoma in 11 EMR countries by 2025	1	5	11
Scabies: To scale up management of scabies in 2 endemic countries by 2025	0	0	1
Rabies: To enhance the annual country reporting and to reduce the number of countries reporting new human rabies cases in the Region	7	9	11
Dracunculiasis: To certify eradication of dracunculiasis in all EMR countries by 2022	0	1	0
Yaws: To certify eradication of yaws	0	0	1

AR: Antiretroviral
N/A: Not applicable

PWID: People who inject drugs

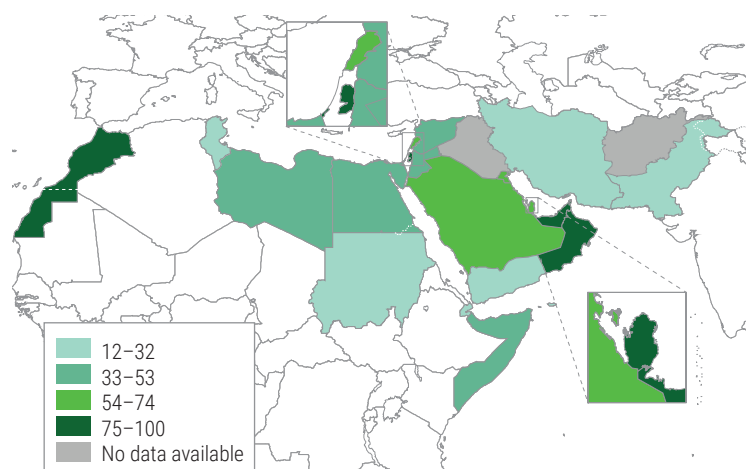

SW: Sex workers

MSM: Men who have sex with men

^r In targeted areas

^s WHO/UNAIDS modelled HIV estimates

Adults and children receiving ARV therapy among all adults and children living with HIV, 2020

List of regional core health indicators

Health determinants and risks

Demographic and socioeconomic determinants

Population size
Population growth rate
Total fertility rate
Adolescent fertility rate (15–19 years)
Net primary school enrolment
Population below the international poverty line
Literacy rate among persons 15–24 years
Access to improved sanitation facilities
Access to improved drinking water
Health life expectancy (HALE) at birth (years)
Healthy life expectancy (HALE) at age 60 (years)

Risk factors

Low birth weight among newborns
Exclusive breastfeeding rate 0–5 months of age
Children under 5 who are stunted
Children under 5 who are wasted
Children under 5 who are overweight
Children under 5 who are obese
Overweight (13–18 years)
Obesity (13–18 years)
Overweight (18+ years)
Obesity (18+ years)
Tobacco use among persons 13–15 years
Tobacco use among persons 15+ years
Harmful use of alcohol (15+ years)
Insufficient physical activity (13–18 years)
Insufficient physical activity (18+ years)
Raised blood glucose among persons 18+ years
Raised blood pressure among persons 18+ years
Anaemia among women of reproductive age

Health status

Life expectancy and mortality

Life expectancy at birth
Neonatal mortality rate
Infant mortality rate
Under-five mortality rate
Maternal mortality ratio
Mortality rate by main cause of death (age-standardized)
Probability of dying between age 30 and exact age 70 from any of cardiovascular disease, cancer, diabetes, chronic respiratory diseases
Mortality rate from road traffic injuries
Mortality rate attributed to household and ambient air pollution
Mortality rate attributed to unsafe water, unsafe sanitation and lack of hygiene
Suicide mortality rate

Morbidity

Cancer incidence by type of cancer
Tuberculosis notification rate
Estimated number of new HIV infections cases
Estimated number of new HIV reported cases
Incidence of hepatitis B
Incidence of confirmed malaria cases
Incidence of measles cases
Number of people requiring interventions against neglected tropical diseases
Number of new cases requiring individual treatment and care
Number of people requiring mass treatment (preventive chemotherapy)

Health system response

Health financing

Per capita current health expenditure
Out-of-pocket expenditure as % of current health expenditure
Domestic general government health expenditure as % general government expenditure
Incidence of catastrophic expenditure at 25% of household consumption or income
Incidence of impoverishment due to out-of-pocket health expenditure

Health workforce

Density of health workers:
a-Physicians
b-Nursing and midwifery
c-Dentists
d-Pharmacists
Density of recent graduates of registered health profession educational institutions

Country capacity

International Health Regulations (IHR) technical areas
IHR annual reporting
Joint external evaluation (JEE) score
UHC service coverage index

Health information system

Birth registration coverage
Death registration coverage
Completeness of cause of death data

Medicines and medical devices

Availability of selected essential medicines in health facilities
Density per million population of selected medical devices in public and private health facilities

Service delivery

Density of primary health care facilities
Hospital bed density

Surgical wound infection rate
Proportion of bloodstream infection due to *Escherichia coli* resistant to 3rd-generation cephalosporin, median (%)
Proportion of bloodstream infection due to methicillin-resistant *Staphylococcus aureus* (MRSA), median (%)
Annual number of outpatient department visits, per capita

Service coverage

Demand for family planning satisfied with modern methods
All Woman
Antenatal care coverage (1+; 4+)
Skilled birth attendance
Children under 5 with diarrhoea receiving oral rehydration therapy
DTP3/pentavalent immunization coverage rate among children under 1 year of age
Measles immunization coverage rate (MCV1)
Coverage of service for severe mental health disorders
Treatment coverage for opioid dependence
Tuberculosis treatment success rate of new and relapse cases
Tuberculosis treatment coverage rate
Percentage of suspected malaria cases that have had a diagnostic test
Percentage of population sleeping under insecticide-treated nets
Antiretroviral therapy (ART) coverage among all adults and children living with HIV
Percentage of key populations at higher risk (who inject drugs, sex workers, men who have sex with men) who have received an HIV test in the past 12 months and know their results

Annex: Metadata for blood stream infections (anti-microbial resistance)

Metadata for blood stream infections (anti-microbial resistance)

Abbreviated name	Bloodstream infections caused by resistant organisms.
Indicator name	Reduce the percentage of bloodstream infections due to selected antimicrobial resistant organisms.
Domain	Antimicrobial resistance.
Related terms	Antimicrobial resistance, Surveillance, Prevention and Control.
Definition	Frequency of bloodstream infections among hospitalized patients caused by methicillin-resistant <i>Staphylococcus aureus</i> (MRSA) or by <i>Escherichia coli</i> resistant to 3rd-generation cephalosporin.
Numerator	Number of patients with bloodstream infection due to MRSA or extended-spectrum beta-lactamases <i>E. coli</i> among patients seeking hospital care.
Denominator	Number of patients seeking hospital care and from whom the blood specimen was taken due to suspected bloodstream infection and the blood specimens have been cultured and AST performed.
Measurement method	The WHO Global AMR Surveillance System (GLASS) supports countries to implement national antimicrobial resistance (AMR) surveillance systems. At national level, cases are reported for patients from whom routine clinical samples have been collected for blood culture at surveillance sites according to local clinical practices, and antimicrobial susceptibility tests (AST) are performed for the isolated blood pathogens. The microbiological results (bacteria identification and AST) are combined with the patient data and related to population data from the surveillance sites. GLASS does collect information on the origin of the infection either community origin (less than 2 calendar days in hospital) or hospital origin (patients hospitalized for more than 2 calendar days). Data are collated and validated at national level and reported to GLASS where epidemiological statistics and metrics are generated.
Estimation method	See Annex 3: Analysis and interpretation of data on antimicrobial resistance published in GLASS Report: Early Implementation 2020, available at https://www.who.int/publications/i/item/9789240005587 .
Disaggregation	Geographical.
Primary data sources	National AMR data collected through the national AMR surveillance system and reported to GLASS.
Alternate data sources	Published and non-published data from national centres and research/academic institutions and from others surveillance networks.
Measurement frequency	Annual.

Health information and research in the Eastern Mediterranean Region at a glance – 2021

National data for health

In **2020** in the Region, on average **82%**, **77%** and **62%** of the core indicators were reported by high-income, middle-income and low-income countries, respectively

9 countries have NOT conducted a census in the last 10 years

Low/lower middle income 6
Upper middle income 3
High income 0

10 countries have conducted population-based surveys that meet international standards within the last 5 years

Only **74%** of births and **59%** of deaths in the Region are registered appropriately and in a timely manner

8 countries have conducted comprehensive assessments of their national health information systems since 2016

17 countries use ICD-10 for mortality and morbidity recording

5 countries are piloting ICD-11

11 countries have reported cause-specific mortality data in the last 5 years

– Only 4 countries reported to WHO cause of death data by ICD in 2020

Research and dissemination

47 WHO collaborating centres are currently active in the Region (September 2021)

16 out of **21** countries reported having a health research governance unit/body within the ministry of health (2021)

12 out of **20** countries reported having a national research ethics committee (2021)

3 countries have national primary clinical trial registries

Evidence to policy

19 out of **22** countries are members of the Regional Network of Institutions for Evidence and Data to Policy (NEDtP) initiative

Only **4** countries have established national guideline development programmes

Only **2** countries systematically use health technology assessment reports in national policy-making

Publications

Academic journals in the Region indexed in PubMed & IMEMR

- 755 peer-reviewed journals indexed in IMEMR
- 593 journals; among these 755 are open access (79%)
- 154 journals are indexed in PubMed (21%)

5 countries produce **82%** of the Region's public health research publications (PubMed 2004–2018)

5 universities alone produce over **17%** of all the Region's health-related research publications indexed in PubMed (2004–2018)

During **2014** to **2018** the average health research production was 4.71 papers per 100 000 population (PubMed)
